Aluminum Finishing

Polishing corner welds with the POLY-MAGIC-WHEEL

Obtaining good polish quality when finishing corner welds is difficult, especially for the fabrication of railings. The POLY-MAGIC-WHEEL was designed to help you more easily produce a truly perfect finish in these applications. This highly compacted fleece disc was designed specifically for grinding and polishing bead and corner welds. The POLY-MAGIC-WHEEL disc can reduce the time required for this work to a minimum, and the result can only be described as a minor miracle.

Carry out the initial grinding and leveling of welds with the red disc, grit A (80 grit). If the weld is very coarse it is a good idea to use the TRIMTEX® disc first.

Then polish to a mirror finish using the POLY-MAGIC gray disc, grit B (900 grit). These discs are very aggressive; they save a lot of working time and the result is sensational. No polishing compounds or creams are required for polishing with the POLY-MAGIC-WHEEL (dry polish).

Mirror finish in 3 steps:

1. TRIMTEX® for coarse welds

2. POLY-MAGIC WHEEL A (80 grit)

3. POLY-MAGIC WHEEL B (900 grit)

Step 1 – Trimtex – Multifunctional Flap Disc for grinding in corner, on flanges and flat surfaces.

- Extremely high number of flaps provide very long service life.
- Ideal for smoothing welds in corners and on flanges, producing clean, “soft” transitions.
- Hemp backing plate is trimmed automatically which grinding.
- The new, active agent composition in the abrasive fabric further reduces the surface temperature of the workpiece.
- 100% pure zirconium ensures perfect results on steel and stainless steel.
- Ideal for use on speed-controlled angle grinders.

Size	Grit	Max Speed	Quantity	Part #	Price Ea.
4-1/2" x 7/8"	40	12,000 RPM	5 pack	14-93704	
4-1/2" x 7/8"	60	12,000 RPM	5 pack	14-93706	
5" x 7/8"	60	11,000 RPM	5 pack	14-93716	
5" x 7/8"	80	11,000 RPM	5 pack	14-93718	

Steps 2 & 3 – Poly-Magic Wheel – Ideal for grinding and polishing corner welds.

- Highly compressed fleece material strengthened by impregnated foam.
- More abrasive material to be used than on conventional unitized wheels
- Producing up to a mirror finish in two steps

Size	Grit	Max Speed	Quantity	Part #	Price Ea.
6-1/2" x 1/2" (7/8" arbor)	80	5,000 RPM	5 pack	14-96720	
6-1/2" x 1/2" (7/8" arbor)	900	5,000 RPM	5 pack	14-96721

Aluminum Finishing

Tiger Shark Plantex

The new dimension for grinding aluminum

TIGER SHARK-PLANTEX® elastic discs are unbeatable for the difficult grinding of aluminum. High material removal, reduced grinding temperature and no glazing with aluminum particles make the TIGER SHARK® the first choice for these applications. This flap disc, with its ceramic/corundum cotton abrasive fabric, also offers high grinding capacity and low tool costs for steel and nonferrous metals. The backing plate is elastic PLANTEX® earth-friendly compound and adjusts well to the shape of the workpiece. TIGER SHARK® is ideal for grinding curved surfaces and shapes, and it is often used in car body shops, car workshops and for tool making.

The excellent features of the TIGER SHARK® can be enhanced even further with the newly developed Kangaroo ALU-FIX® OIL (see below). A quick spray on the workpiece will solve many of the problems you may have encountered while grinding aluminum in the past. Glazing is no longer a problem. The material removal rate is up to 300% higher, the finish is visibly better – and the flap disc will last around three times longer.

Size	Grit	Max RPM	Carton Qty	Part #
4-1/2" x 7/8"	60	13,300	10 pack	14-93826

Kangaroo ALU-FIX® OIL

Spray on aluminum workpiece to improve the removal rate and increase abrasive life. Available in a 1 pint spray bottle or a 1.3 gal. canister with a spray bottle.

Part Numbers:

1-pint spray bottle – 40010

1.3 gal. canister & spray bottle – 40010k

Aluminum Finishing

Accurate has...Unitized Wheels

Unitized wheels are produced by compressing several layers of Abrasive Non Woven material impregnated with resin.

They are designed to offer the best finishing, with high tear resistance and long life. Excellent for deburring, cleaning, blending and finishing of stainless, titanium, aluminum, alloys, plastic and fiberglass.

The Benefits

- **Long Lasting** – incredible resistance to tearing when working on sharp edges
- **Best Finishing** – A consistent, uniform finish (close to mirror finish) can be reached without smearing in one step, as opposed to multiple steps, saving time. Unitized wheels improve surfaces without significantly changing the shape or dimension of the workpiece.
- **No Loading, Low Temperature** – The non-woven structure is resistant to loading and minimizes heat buildup.
- **Flexible & Conforming** – Depending on the density, the user can have a soft and flexible material, with high conformability, or a more aggressive action. In all densities, the unitized wheel can be dressed to follow the shape of the work piece and work in narrow areas.
- **Low Noise** – The soft structure reduces the noise level during the working process.

Unitized Wheel with a center hole

For portable or stationary machines.
Diam. 3",6",8" – Thicknesses of 1/4", 1/2", 1"

Unitized Wheel – Quick Change – Roloc Style

For portable tools
Diam. 2", 3"

Unitized Wheel – Fiberglass Disc

For angle grinders to work on wide surface.
